COVER LETTER

I have been working in IT companies since 2014 as a Front-end developer.

I have built expertise in front-end technologies within commercial projects in many different business domains. Applies my technical expertise to develop efficient software solutions, based on clients' specific business and technical requirements.

Mostly I've been working on unique design websites that I've built from scratch and the most preferred CSS framework for me is Bootstrap.

As a Front-end Developer, I'm a part of different teams and together we create websites, web apps, newsletters, web designs, and much more.

Debugging existing client-side code as needed and troubleshooting performance issues.

Excellent communication and organizational skills gained in multinational work environments. A verse in agile software development (Scrum).

As a seasoned freelance web developer and the founder of Zin Style LTD., I bring a wealth of experience in crafting dynamic and visually appealing WordPress websites tailored to meet the diverse needs of businesses across various industries. With a keen eye for design and a commitment to delivering high-quality solutions, I have successfully collaborated with clients to enhance their online presence and achieve their digital objectives.
